

Revision date: 12/10/2025

Life Saving Rules

Activities or work tasks may include more than one Life Saving Rule. The following requirements apply to all Life Saving Rule activities.

General Requirements

Risk Assessment	Prior to each Life Saving Rule activity, a risk assessment must be performed. The scope of the risk assessment must be appropriate for the task.
Fitness for Duty	Prior to any Life Saving Rule activity, confirm that all workers are fit for duty.
Training and Competency	Prior to any Life Saving Rule activity, confirm that all workers are trained and/or competent for the task they are to perform.
Hazard Identification and Mitigation	<p>Prior to and during each Life Saving Rule activity, a system must be in place to:</p> <ol style="list-style-type: none">1. Identify hazards2. Provide mitigation for those identified hazards3. Ensure the ongoing effectiveness of mitigations <p>For control of work activities, ensure that acceptable work conditions are communicated to affected personnel.</p>
Changes in Work Scope and/or Conditions	<p>For any changes in work scope and/or conditions:</p> <ol style="list-style-type: none">1. Stop the work2. Reassess the hazards3. Verify effectiveness of existing and/or any new safeguards prior to recommencing work
Life Saving Rules Verification	Each Business Unit must have in place a Life Saving Rules Verification process that addresses the Critical Controls and all Minimum Requirements.

Work Permits

Critical Controls

The Critical Controls for Work Permits are:

- **Work** with a valid work permit when required
- **Verify** all isolations
- **Perform, evaluate, and document** initial and periodic atmospheric testing as required by the permit

Scope of Work

The scope of work must clearly describe:

- The work to be performed
- The work location

Competency

All persons working under the work permit must be competent to perform their assigned tasks.

Permit Requirements

Prior to the start of work, permit requirements must:

- Be communicated to all affected persons, including those that arrive after work has begun
- Account for interactions with other work permits and any non-permitted Simultaneous Operations
- Define methods for revalidation if needed

Hazard Control/Mitigation

Confirm mitigation for all hazards identified on the permit prior to the start of work and as needed throughout the task.

Hot Work

Prior to and during any Hot Work activities:

- Identify and control all ignition sources
- Remove or shield all flammable or combustible materials

Changing Conditions

When conditions and/or work scope change:

- Stop the work
 - Reassess the hazards
 - Revise the permit as necessary
 - Confirm/reconfirm original and any additional hazard mitigation measures
-

Process/Mechanical/Electrical Isolation

Critical Controls

The Critical Controls for Process/Mechanical/Electrical Isolation are:

- **Identify** all energy sources
- **Isolate**, Lock and Tag all energy sources
- **Verify** absence of energy before start of work (Try)

Identifying Energy Sources

Energy sources must be:

- Identified by Authorized Persons
- Documented on applicable permits, LOTO plans, isolation certificates, etc.

Isolating Equipment

All isolations must be performed by an Authorized person.

NOTE: All Isolations (including self-isolations) completed within defined limits/scope of a turn-around must be approved via permit to work and integrated with applicable SIMOPS processes.

Locking and Tagging Equipment

Locks and Tags must:

- Be placed on each isolating point while work is being performed
- Prevent the operation of the isolating device
- Clearly identify isolation points and lock owner
- Be removed only by Authorized Persons Isolation

locks and keys must be strictly controlled.

NOTE: Exceptions for minor servicing activities which take place during normal production operations, cord & plug equipment, and where isolation points cannot be physically locked, are allowed when tasks meet the specified criteria in accordance with OSHA 1910.147 and are performed in compliance with applicable national standards.

Verify Zero Energy (Try)

Prior to the start of work, a physical walk-through of the installed isolation and verification of zero energy must be performed, at a minimum, with the authorized person and lead worker who is performing the work, when not the same person.

Absence of energy must be confirmed:

- After work breaks, as necessary
- As required by permits or LOTO plans
- By opening bleeder valves, operating start/stop switches, testing for hazardous materials, testing for absence of voltage, etc.

Driving

Critical Controls

The Critical Controls for Driving are:

- **Do not drive** when impaired or fatigued
- **Wear** a seat belt when vehicle is in motion
- **Do not exceed** the speed limit
- **Do not use** mobile devices while driving

Driving Behaviors

Drivers on company business or property must:

- Obey local driving regulations
- Drive to accommodate weather and road conditions
- Pull over and take a break when necessary
- Utilize spotters when required

Mobile Devices

Mobile devices include:

- Mobile Phones
- Tablets
- Laptops

The use of mobile devices while driving for work-related purposes, even with hands-free features, is prohibited.

Mobile devices may be used as navigational aids for turn-by-turn directions via audible speech from the device. Manual activation or manipulation must only be performed when the vehicle is safely parked.

Special Circumstances:

A mobile device may be used while operating a vehicle to communicate with emergency personnel or any person that can immediately report or mitigate the danger or risk in situations involving:

- Imminent danger to life
- Exposure to substantial risk to personal or public safety
- Personal injury
- Substantial loss of company property

Journey Management

Perform a pre-trip inspection prior to operating a vehicle. Complete a Journey Management Risk Assessment when required.

Excavation

Critical Controls

The Critical Controls for Excavation are:

- **Identify** all underground services
- **Verify** all isolations are in place and effective
- **Enter** excavations only with appropriate protective systems in place

Underground Services

Prior to and during excavation activities, underground services must be:

- Positively identified
- Marked and markings maintained
- Deenergized when required

Energy Isolations

Verify absence of energy for any associated energy isolations.

Entering Excavations

Never enter an excavation before:

- Determining if a confined space entry permit is required
- A competent person has inspected the excavation
- An appropriate protective system is in place and inspected, as required
- Verifying a safe means of access and egress

Excavation Equipment

When excavation equipment is in use, utilize competent spotters to:

- Aid in identification of underground hazards
- Warn personnel of heavy equipment movement
- Identify and communicate overhead hazards

Always establish, maintain, and honor barriers and exclusion zones.

Lifting Operations

Critical Controls

The Critical Controls for Lifting Operations are:

- **Establish**, maintain, and honor barriers and exclusion zones
- **Do not walk** under a suspended load
- **Confirm** all lifting equipment is rated for the load

Competency Requirements

Ensure all employees meet competency requirements for their tasks, including:

- Lift plan preparers and approvers
- Lifting equipment operators
- Riggers
- Signalpersons
- Lift supervisors

Equipment Inspections

Conduct the required inspections of the following equipment:

- Lifting equipment
- Rigging components
- The load to be lifted and any rigging attachment points

Ensure load limits and inspection dates, as required, are clearly marked, understood, and appropriate for the load. Ensure that third party certifications of all lifting equipment and components have been completed.

Suspended Loads

When loads are suspended:

- Establish clear escape routes
- Establish an agreed upon set of standard hand signals
- Establish a communication plan for blind lifts
- Do not walk under a suspended load
- Utilize tag lines or other assist devices to guide and set load

Critical Lifts

Complete a Critical Lift plan when required.

Barriers and Exclusion Zones

Establish, maintain, and honor barriers and exclusion zones.

Working at Heights

Critical Controls

The Critical Control for Working at Heights is:

- **Maintain** 100% fall protection where required
 - **Plan** for fall prevention and/or protection when working from ladders
-

Equipment Selection and Inspection

Before working at heights, a qualified person must:

- Determine if work can be completed at grade or in a manner not requiring personal fall arrest equipment
 - Identify rated anchor points, above the worker's head, where possible
 - Inspect all fall arrest equipment, including:
 - Full body harness with a D-ring attachment point
 - Lanyards with shock absorbers or fall limiting devices
 - Dual action, self-locking snap hooks at each connection
 - Remove any damaged equipment from service
-

Dropped Object Prevention

Protect against dropped objects by:

- Securing tools and equipment from falling to a lower level
 - Establish and maintain exclusion zones below overhead work
-

Working at Heights

All personnel working at heights must:

- Maintain 100% fall protection where required
 - Only work on scaffolding built, modified, and inspected by a competent person
 - Plan for fall prevention and/or protection when working from ladders
 - Have an established rescue plan, including equipment to minimize suspension trauma in the event of an arrested fall
 - Protect all wall and deck openings
-

Confined Space Entry

Critical Controls

The Critical Controls for Confined Space Entry are:

- **Verify** all isolations are in place and effective
- **Perform** all required initial, periodic, and continuous atmospheric monitoring
- **Prevent** unauthorized entry

Energy Isolation

Verify that all energy isolations are in place and effective Acceptable isolation methods for confined space entries are:

- Blinding/Positive Isolation
- Disconnecting process piping
- Isolating all electrically driven/powered equipment

Atmospheric Testing

Ensure Atmospheric testing equipment is calibrated, inspected, and maintained Perform, Evaluate, and Document the following atmospheric testing:

- Initial
- Periodic
- Continuous, as required

Establish and maintain ventilation as required by permit.

Confined Space Attendant

The confined space attendant's duties are:

- Maintain communication with entrants
- Evacuate the space in the event of an emergency
- Do not enter the confined space
- Prevent unauthorized entry

Emergency Response

Emergency response procedures and resources are in place.

Entry Authorization

The confined space entry permit requirements must be communicated to all entrants and the attendant(s).

The permit must be posted at the point of entry.

A log of personnel in and out of the space must be maintained when required.

Bypassing Safety Devices

Critical Controls

The Critical Controls for Bypassing Safety Devices are:

- **Obtain** authorization prior to bypassing, disabling, or inhibiting a safety protection device or system
- **Communicate** all bypasses between shifts/crews.
- **Use** personal safety devices when required.

Risk Assessment and Authorization

Prior to bypassing a safety protection device an authorized person must perform a risk assessment that includes the following:

- Identifying the affected safety protection devices
- Understanding the impact of interaction with other safety protection devices and on the system as a whole
- Mitigating the associated risks
- Completing any required Management of Change processes

Authorization level must be based on risk assessment results.

Common Safety Protection Devices

Common safety protection devices include:

- Emergency shutdown systems
- Fire and gas systems
- Process controls and alarm systems
- Relief valves
- Crane operator aids (LMIs, Anti two-block)

Bypass Logs and Management Reviews

Bypassing safety protection devices requires:

- A current log for bypassed safety protection devices.
- A routine management review for all bypasses or inhibits

Communication and Shift Handovers

The communication plan must cover all shift and crew handovers.

Line of Fire

Critical Controls

The Critical Controls for Line of Fire are:

- **Establish, maintain, and honor** barriers and exclusion zones
- **Position** yourself and others to avoid line of fire hazards
- **Protect** against dropped objects

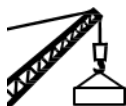

Barriers and Exclusion Zones

When establishing barriers and exclusion zones consider the following:

- Overhead lifts, pressure testing, moving equipment, overhead work, etc.
- Completeness, maintenance, and communication of barricades
- Adherence to barriers and exclusion zones

Positions of People

When determining the proper position of people during work, consider:

 Moving Vehicles and Heavy Equipment – barricades, spotters, evaluation and planning of traffic patterns.	 Pressure – breaking flanges and hose connections, removing plugs, blowing down equipment, pressure testing.
 Suspended and Swinging Loads – tethering of tools/equipment, management of loads with tag lines and guide poles, evaluation of centers of gravity and environmental conditions.	 Pinch Points – activities that subject people to crushing injuries.
 Dropped Objects – secure tools and equipment from falling to a lower level and establish and maintain exclusion zones below overhead work.	 Electricity – avoid working on or near energized electrical equipment.
 Tensioned and Compressed Objects – equipment in stress and the expected direction of energy release in a failure scenario.	 Projectiles – identify tasks that generate flying debris, such as grinding and chipping, before starting work.
 Objects with Fall or Roll Potential – unexpected movement of tools or equipment, securing of materials such as piping.	 Pushing and Pulling – anticipate the possibility that tools or equipment may suddenly loosen or slip.

The Company establishes programs, policies, and procedures appropriate to the business needs and requirements of its various operations and organizations ("Policies"). Different Policies than those shown here may apply to subsidiary company employees based on business needs, local customs, contractual agreements, or legal requirements. The Company reserves the right to change, amend, or terminate any of the Policies at any time, without notice, subject to applicable law and/or the terms of any applicable collective bargaining agreement or contract. This information is not intended to supersede applicable local, state, or federal law or the terms or provisions of any current collective bargaining agreement. In the event of conflict, the law or collective bargaining agreement shall prevail. If there are any discrepancies or conflicts between this information and the terms of the official Policies or any underlying insurance contracts, the official Policies and insurance contracts will control your actual benefits. Employees should confirm that the Policies accessed here apply to them and/or their organization before taking any actions.
