SPIRIT Values Spotlight

Longest rotary well in Alaska for the 17th time

In July, ConocoPhillips Alaska broke the state record for longest rotary well — 32,468 feet. Doyon Rig 25 drilled to a measured depth of 14,370 feet before turning horizontally into the reservoir and drilling another 18,098 feet, completing six miles of drilling. “When we drilled the first horizontal well in Prudhoe Bay roughly 30 years ago, it almost felt like Christopher Columbus sailing off the edge of the earth,” said Drilling Manager Chip Alvord. “We just keep pushing the envelope. I didn’t think we’d ever be drilling wells like this.” At CD5-98, ConocoPhillips not only broke the Alaska record but also an onshore North America record, for total combined footage of 47,828 feet for a single well and two laterals. Wells this long have led to ConocoPhillips Alaska setting the record for 17 of the 20 longest wells in Alaska since 2010. The top 10 longest wells in Alaska were drilled at CD5, which achieved first production in 2015. “Four to five years ago no one thought that we would be able to deliver these kinds of wells with the rig we have,” said Johnson Njoku, supervising drilling engineer for the Western North Slope. “The equipment hasn’t really changed. It’s about folks willing to do the engineering work, pushing the envelope, and the team in the field delivering. This would not have been possible without leadership support.” Click [here](#) to read more.
